

Module 3: Pivot Tables and Aggregation

Objective: Summarize large datasets into meaningful cross-tabulated views.

Concepts: index, columns, values, aggfunc, multi-level groupby.

Module 4: Custom Row Classification

Objective: Apply business rules to classify records using custom logic.

Concepts: apply function, row-wise operations, conditional labeling.

Module 5: Time Series Aggregation

Objective: Summarize transactional data by time period and visualize trends.

Concepts: datetime parsing, resample, monthly grouping, trend charts.
